

ATTENTION: Men or Women with Keloids

Research Study Participants Needed

YOU MAY BE ELIGIBLE TO PARTICIPATE

- Are 18 years old or older
- Have unwanted keloids on the body
- Are willing to have UVB light treatments *1-3 times a week*

ABOUT THE RESEARCH

Ultraviolet B light (UVB) has been used successfully to treat a variety of skin lesions. This research study is being done to see if keloids can be made softer or flatter with UVB light.

Our UVB light machine allows targeted delivery of light energy to individual keloids on the skin
